

YOU'RE INVITED

WEDNESDAY DECEMBER 4, 2013 // 6:00 PM // OCEAN PRIME - TROY

The Michigan Surgical Hospital and Lakes Surgery Center *present*

Technological Advancements in Pain Control & Minimally-Invasive Surgery

Dinner Presentation Agenda:

6:30 pm: Introduction

6:40 pm: Dr. Baisa presents "An Innovative & Personalized Approach to Pain Management".

7:40 pm: Dr. Ron Lederman discusses his exclusive treatment using MLS Laser Therapy. Different from current laser therapies, MLS Laser Therapy works at a cellular level using a combination of laser emissions, simultaneously decreasing swelling and pain and accelerates the healing process. MLS Laser Therapy treats neck pain to foot pain and conditions in between, including back pain, tendonitis, disc injuries, tennis and golf elbow, traumatic injuries and speeds healing after surgery.

7:50pm - Dr. Lucia Zamorano provides information on her use of the cutting edge robotics system for spine surgery. The Mazor Robotics Renaissance Guidance System is exclusively available at the Michigan Surgical Hospital. Dr. Zamorano utilizes the system's unparalleled accuracy to advance surgical procedures, such as minimally-invasive fusions for degenerative disc diseases or deformity, kyphoplasty/vertebraplasty, and also performing ground-breaking work to combine the robotics system with endoscopic discectomies - the most minimally-invasive surgical intervention available.
